

Whale vs Fish

Hundreds of years ago, whales were thought to be just like fish. Although they look alike, they are not as closely related as people used to think. Whales are mammals while fish are not.

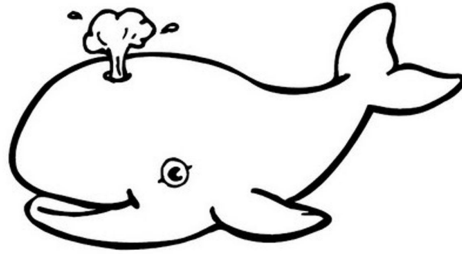

Directions- Color the whale and fish below. Then circle the body parts they have in common.

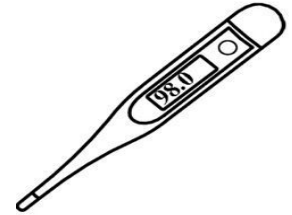

But did you know.....

Mammals have characteristics that other animals do not. Continue to the next page to see how mammals are different and color the pictures:

1) Lungs to breathe air

Thermometer

2) Warm-blooded

3) Gives live birth

4) Drinks milk as a baby

5) Born with hair or fur
