

Whale vs Fish

Hundreds of years ago, whales were thought to be just like fish. Although they can look alike, they are not as closely related as people used to think. Whales are considered mammals while fish are not.

Directions- Look at the characteristics of a whale and a fish then answer the questions on the next page:

- 1) Circle the characteristics that whales and fish have in common.
- 2) List the differences between a whale and a fish-

Whale

Fish

- 3) What characteristics does a mammal have that fish do not?
- 4) Based on these characteristics, are you a mammal?
